

Fund Objective

A fund which invests in a mixture of Shariah-compliant equities, Islamic fixed income securities and Islamic deposits. There is flexibility in asset allocation as this fund may invest solely in Islamic fixed income securities or Shariah-compliant equities. This fund seeks to provide medium to long-term capital appreciation, with a moderate level of volatility. Dana i-Majmuk only invests in Shariah-compliant securities.

Investment Strategy

The fund shall be actively managed, investing in Malaysian Shariah-compliant equities with good fundamentals and growth potential. The fund also can strategically be invested in defensive instruments such as Islamic government securities and/or Corporate sukuk in response to the market and economic changes. The fund aims to provide consistent long-term return above the benchmark.

Asset Allocation

Equities: 0% - 100%

Islamic Debt Instruments / Money Market Papers / Deposits: 0% - 100%

Top 5 Holdings (as at 31-Mar-2024)

Name	% of NAV

Equity

Market Review

The FBM Shariah Index (FBMS) gained 1.0% month-on-month (MoM) to end the month at 11,643 pts. This was largely driven by property and infrastructure counters as investors get excited over the prospect of the stronger economic activities in Johor and the potential announcements of sizeable infra projects by the government. On the other hand, the KLCI declined 1.0% MoM to end at 1,536. MSCI Malaysia index underperformed MSCI APxJ Index by 3.2% in March (vs. February's 5.1%). MYR strengthened 0.4% MoM at 4.73, while 10-year MGS declined 0 bps to 3.85%. Meanwhile, Brent crude oil rose 4.6% MoM to US\$87/bbl. Foreign equities recorded RM2.8 billion net outflow in March 2024, compared to a net inflow of RM1.4 billion in February 2024. Malaysia's bond market recorded 0.4% MoM net foreign outflow in February 2024. Foreign holdings of Malaysia Government Securities (MGS) increased by RM0.6 billion MoM to RM201 billion, which is equivalent to 33.1% of total outstanding MGS.

Market Outlook

Global growth momentum edged higher in March. Services were resilient while the industrial sector saw a further uptick in activity, and new orders crept higher. Although conditions are improving, helped by falling inflation that is bolstering real incomes, growth dynamics are still fragile and divergent. Inflation has been sticky, and goods disinflation is waning while services are still seeing some price pressures. Central banks continue to signal that rate cuts are forthcoming despite somewhat sticky inflation. The Swiss National Bank became the first G10 central bank to cut rates, while the Bank of Japan hiked rates as the last central bank to end negative rates. Momentum in the U.S. stock market continues to be elevated. While tech stocks and the Nasdaq have been the major drivers of the robust equity performance since the beginning of this year, their dominance has been waning in recent weeks. While the US economy looks resilient and market momentum is strong, there are still risks regarding growth and inflation as shown by the latest economic data.

The usual statistical Chinese New Year distortions make it difficult to interpret economic indicators, though the latest Purchasing Managers' Index (PMI)s for March were encouraging. Property related indicators, however, remain in the doldrums. The government kept its Gross domestic product (GDP) growth target at 5.0% for 2024, which is not likely to be as easily achievable as in 2023 when base effects were more favourable. Major equity indices have recovered from their lows earlier this year and are hovering just below their falling 200-day moving averages, with intra-day volatility high and foreign investor sentiment still negative. Meanwhile, following a phase of pronounced stability, the yuan has cautiously started to depreciate versus the US dollar.

While global stocks performed well in March, ASEAN markets experienced mostly flat performance. Singapore stood out with around 2.6% in local currency terms. Meanwhile, Thailand remains the underperformer, while Indonesia and Malaysia's stock performances have been flat. USD strength continues to be a key obstacle for foreign investors considering returning to ASEAN markets. However, once the Federal Reserve cuts rates, we expect improved equity inflows into the region as valuations remains attractive. On the macro front, central banks continue to stay put. Manufacturing PMIs showed marginal improvements, but without a significant rebound.

Fixed Income

Market Review

In March, the market had to recalibrate its expectations for the U.S. Federal Reserve's (Fed) policy rate path amid mixed data - inflation was hotter than expected while U.S. services sector and employment cooled. U.S. Treasuries rose before heading lower post the Fed meeting where they decided to keep interest rates unchanged and stuck to their earlier forecast of a three-quarters of a percentage point cut by the end of 2024. Domestically, the strong onshore demand kept Malaysia Government Investment Issue (GII) yields lower by 1 to 9 bps across the board. The 10y GII ended March at 3.86%, 2 bps lower from the previous month.

USD/MYR ended the month at 4.7250, strengthening from the 4.7428 recorded at end February, partly due to Bank Negara Malaysia's (BNM) engagement efforts with government-linked companies and government-linked investment companies to encourage more consistent conversion of foreign currencies into ringgit. In its Monetary Policy Committee meeting this month, the central bank maintained the Overnight Policy Rate (OPR) at 3.00%. Interestingly, 3-month KLIBOR has been inching up, ending the month at 3.59%, 3 bps higher month-on-month. Headline inflation rose to 1.8% in February 2024 (January: 1.6%), largely because of higher water tariffs. BNM's inflation rate forecast for 2024 is 2%-3.5% as recovering supply chains help to contain price pressures.

The Bank of Japan finally abandoned its negative interest rate policy in March, the last of the major developed market central banks to do so. However, the yen weakened to record levels against the USD as the bank is expected to still maintain an accommodative policy stance in the near term. Credit spreads continued to confound, further tightening about 3 bps this month, with a number of new issues helping in the price discovery. Hong Leong Bank Berhad, CIMB Islamic Bank Berhad, OSK Rated Bond Sdn Berhad, IJM Treasury Management Sdn Berhad and Gamuda Berhad were among the issuers in the primary space.

Market Outlook

Strong pension demand should continue to be supportive of domestic fixed income. While auctions have been very well received year-to-date, Quarter 2 will bring more duration supply of government securities to test this.

Lower developed market rates should also be a tailwind. However, much of this has been priced-in and until the Fed actually cuts there could be periods of turbulence (as observed when market went from pricing in six cuts at the beginning of the year to just three at time of writing). It does seem from the Fed Chair's comments that he is looking for reasons not to cut rather than the other way round.

Geopolitics and China's economic woes along with its currency remain the key risks to the otherwise constructive outlook on Malaysian fixed income.

On the OPR, even though the MYR has been one of the weakest performing currency in Asia, downside risks to growth should keep BNM on hold this year. While second round effects from the soon-to-be implemented fuel subsidy reforms are possible, the drag on demand from higher prices and the weaker MYR could contain this.
